0:00

A lasting solution for excessive underarm sweat.

0:04

This non-surgical procedure uses clinically proven technology to eliminate sweat glands in the armpits, providing a permanent solution for underarm perspiration.

0:15

The procedure is performed in an outpatient clinic. No surgical incisions are made in the skin.

0:24

After the area has been numbed with local anesthesia, the system delivers electromagnetic energy to the armpit via a handheld device in a repeatable pattern, treating the target area multiple times.

0:36

When activated, the device's vacuum suction stabilizes the skin and brings the sweat glands closer to the surface for treatment.

0:44

The system then sends focused electromagnetic waves through the skin and tissue into the armpit area.

0:53

The energy penetrates targeted regions where the sweat glands are located.

0:57

Simultaneously, a cooling system protects the skin surface from burns while concentrating the heat directly at the level of the sweat glands.

1:04

The sweat glands are heated and permanently destroyed. The results of this treatment are long-lasting, preventing any regeneration of the sweat glands.

1:12

A lasting solution for excessive underarm sweat.
